Over the years, Microsoft and other companies have put together many markup languages and formats for expressing all of their content. Usually, this kind of content has been put into files that are then downloaded to the end user's machine for viewing or printing. The problem with this method is that it can be inconvenient to download huge files to different computers and even to different mobile devices. Not only that, but because of all of the files, the user may need to save them to a different location, or he or she may need to transfer them to a CD or flash drive, or save them to a USB drive. This can be a pain when you are downloading hundreds of files. You don't need to be concerned, however, because there are now some great tools out there that make it easier to manage these types of files and to save them to the proper place for the user. A great example of this is a tool called Rinzo XML Editor. This tool allows you to create your own markup language and save it to a file. This file is then saved on your computer or mobile device. The files that you create can be as large as you want them to be. The best part about Rinzo XML Editor is that it is able to generate some of the XML files that you may have used in the past in Microsoft Word or some other program. This is great, because the entire content of the file is not saved, just the tags that you put on the document. When you use Rinzo XML Editor, the files that you create can be in the following formats: • Simple HTML • Rich Text Format (RTF) • Microsoft Word • OpenDocument Format (ODF) • Open Document Format for Spreadsheets (ODS) • OpenDocument Format for Text (ODT) • Microsoft Excel • Microsoft Access This particular tool also has a powerful feature that allows you to create folders for all of the files that you create with it. Why would you want to use this tool? This is a great choice when you have a lot of documents that you need to keep track of. If you have an iPad, you can then use this app to save your files and to have them synced with your other devices. Another thing that you can do with this tool is to create or edit your own markup language.
