Vue 2.1 ActiveX version is a powerful visual toolkit with features which are unique in the world of development tools. The 2.1 version introduces support for XBOX 360 development. It offers new functions for the plugin implementation, the new splash screen, new forms and controls, new key/button handlers, enhanced dialogs, new animation support, new events and much more. It has many features which address the problems of clients who use visual tools developed for the 2.0. Among many exciting features, the animation support offers the ability to define custom animations for all controls and dialogs, creating animations which are variable based on other variables such as the current focus item (or control) and even the state of windows. jQuery Tree is a tree plugin for jQuery. It can easily build a JSP-like tree view like Windows Explorer, and it provides rich features for customize the tree view. For example, you can specify where children will render (left to right, top to bottom, each column...), choose how a node can be expanded or collapsed, allow multiple selection of the same node, etc. SWFObject is a JavaScript utility that enables you to include external objects (SWF files) and elements (buttons, text fields, etc.) in your Web pages. It includes two main parts: the SWFObject manager, a JavaScript utility that loads, embeds and executes SWF files on the fly. This utility can be used in both production (SWF files are embedded on Web pages) and development (SWF files are loaded dynamically) scenarios. The SWFObject effect, which is provided as a JavaScript library, enables you to add an object with a given class name to a page. For instance, you can add a button and style
