A vector graphics software, an alternative to a raster graphics software, used for computer-aided drafting, design, and computer graphics. A software that creates visual representations of mathematical, scientific or technical information, using a collection of symbols called glyphs. With vector graphics, a graphic is created by creating simple shapes which are combined to create more complex shapes, such as paths, fills, and strokes. The process of creating a vector image consists of a system of coordinates in which all vectors and graphics are defined by a base (usually the X and Y coordinates), and a destination (usually the Z and W coordinates).
