Although there is limited research into the use of antipsychotic agents in the treatment of anorexia nervosa, case reports suggest that the use of risperidone in this context may be efficacious. We evaluated the use of risperidone in the treatment of anorexia nervosa. This is a naturalistic, open-label, retrospective study in which patients who had been prescribed risperidone for anorexia nervosa at two psychiatric clinics were identified and reviewed. The primary outcome measure was the rate of treatment response. Of the 15 patients who received risperidone in this study, 13 had a successful outcome and one experienced a partial response. There was no evidence of weight gain or weight loss as a side effect in this small sample. The side effect profile of risperidone in anorexia nervosa was benign. Risperidone may be effective in the treatment of anorexia nervosa. A randomized, placebo-controlled, double-blind trial to evaluate this issue would be desirable.Tips for planning your father's 60th birthday Getting your dad's birthday gift right this year could be easier than you think.
