What's New In?

Control: The API Control (Advanced Programming Interface) extends your abilities to write program code directly in the application. The API Control offers a more intuitive, flexible, and extensible programming model for generating and manipulating drawings, views, and annotation objects (video: 1:31 min.) The API Control is a powerful tool to implement advanced concepts without having to write code. It is especially useful when you need to generate files like PDFs or Word documents or when you want to extend the functionality of AutoCAD by creating custom commands. The API Control can also be used to manipulate drawings and annotations. For instance, you can update the position of a 2D view, rotate an image, or delete an annotation. **About Web Forms:** AutoCAD Web Forms provides an easy, rapid way to display or update data from within the application. The application makes use of standard HTML form techniques to enable you to store data within AutoCAD and retrieve it later. You can use Web Forms to display data that is stored locally or over the network, and you can also make use of this functionality in your custom applications. (video: 1:23 min.) **Customization:** Create your own artwork, business forms, maps, and schematics and share them as templates that other users can use. The new System Preferences panel enables you to add a number of options and customization features to customize your experience. (video: 1:27 min.) A new user interface can be used to customize or personalize your experience. You can now access the Preferences panel from the Home tab on the ribbon. There are several new user interface elements, including icon sets, a new user Interface tab, and a personal shortcuts area. **Information Center:** Find the latest information about AutoCAD and other Autodesk products in the new AutoCAD Information Center. **Draw:** A new set of tools and options is available to help you complete more complex tasks. The AutoShape tools help you create polylines, text, arcs, freeform curves, splines, and hyperbolic curves. The new Snap to Grid, Snap to 3D objects, and Dynamic X, Y, and Z snap options allow you to quickly align items with other existing objects. The new Crosshair tools help you control the orientation of the view and the location of the crosshair pointer on the screen.
