## **Cutok Dc330 Driver**

I replaced my first printer, a cheap Brother used for only 2 printers because I had to buy another one to use the color, and used that one for the first 10 months of my life with kubuntu - mostly printing as well, just not from the printer itself - then realized that it wasn't really working. When I bought my first server, I was even more sure that it was something that I needed, so I ordered the identical one, and for the first three months I printed most of our proofs on it, just kept my old printer as a backup. It is then that I realized that I needed to get a dedicated printer, so I started to seek for the best replacement, and I spent a bit of time sifting for it, something that I am sure you have been through as well.
