# HACK Prototype 1 (toni Carp)

**Download**

Pro tip. If you make a completely defamatory statement, against a blogger, with no evidence to back it up, you could be leading a man on. Thats exactly what Hartnett has done. His statement is wholly defamatory, since its not actually about DeAngelo, yet, if its not about DeAngelo, its about Hacknett, so its pure slander. His statement would be false, since there is no evidence linking him to criminal activity, yet, he does this from a for-profit platform, where he can make money from his defamatory statement. So, he is making false statements about a man, who can then be held accountable by law. This is slander and libel, and could be classified as defamatory/libelous. In Myanmar, a camera trap recorded a rare leopard in the montane forests of Myanmar's Karen State.[87] The Northern Tenasserim Forest Complex is considered a leopard stronghold. In Thailand, leopards are present in the Western Forest Complex, Kaeng Krachan-Kui Buri, Khlong Saeng-Khao Sok protected area complexes and in Hala Bala Wildlife Sanctuary bordering Malaysia. In Peninsular Malaysia, leopards are present in Belum-Temengor, Taman Negara and Endau-Rompin National Parks.[88] In Laos, leopards were recorded in Nam Et-Phou Louey National Biodiversity Conservation Area and Nam Kan National Protected Area.[89][90] In Cambodia, leopards inhabit deciduous dipterocarp forest in Phnom Prich Wildlife Sanctuary and Mondulkiri Protected Forest.[91][92] In southern China, leopards were recorded only in the Qinling Mountains during surveys in 11 nature reserves between 2002 and 2009.[93]

HACK Prototype 1 (toni Carp)

okay, the annual summer-autumn season check-out is underway. here are the latest details on the work force (and non-work force), the numbers, and the overall status of work at the station. there are only four maintenance positions left, and all of the remaining non-equipment positions are in the lab or the cookhouse. the new position of "snowcat crew leader" is being filled, so we're still short one person. in contrast, the four remaining equipment positions are now filled, with two technicians and two mechanics, so i'm calling this phase of equipment development complete. the first of the two remaining mechanics, a summer intern, is gone, but will return in the summer. the other mechanic is still working at the station, and one of the two technicians remains on an extended contract. the lab technician is on leave, as is the lab's lab manager, along with the lab's equipment manager. they are all due to return in the summer. meanwhile, the three newest lab staff are all in this summer's carpenter program, and only one of them will return to pole. the two civilians, lab assistants, are due to return to the states in october. so far, the carpenter program has been quite a success, with all the carpenters returning next year. it's possible that the new lab technician could be involved in the carpenter program, but i'm not sure yet, and there are not enough summer jobs for everyone. there was a lot of reading, of course, and much science discussion. some of the team has settled on a couple of theories. one is that the original shackleton team had to do all of their base-camp preparation in january, and the second group had to do so in july. there's still plenty of time for a third group to come along, and some of them have already arrived. they include doug huffman (a 13 year old from washington, dc who is working on a shackleton project), matt simmons (one of the shackleton descendents), mike horn, joanne ousland, larry reid and mike harvey. there's also a fourth group of another type: scientists and artists who are very interested in astronomy and geology, but who have a particular interest in the forces that shaped the earth. they've also just got here. they are the future! 5ec8ef588b
